

2. From following information find the correlation coefficient between advertisement expenses and sales volume using Karl Pearson's coefficient of correlation method and also interpret the result.

Firm	1	2	3	4	5	6	7	8	9	10
Advertisement Exp.(Rs. In Lakhs)	11	13	14	16	16	15	15	14	13	13
Sales Volume (Rs.In Lakhs)	50	50	55	60	65	65	65	60	60	50

3. Write your understanding on hypothesis testing with its importance. Also discuss the steps involved in hypothesis testing including its types. [8+12]

****BEST OF LUCK****

4

SECTION A

Comprehensive Answer Questions

Attempt any six (6) questions out of eight (8) questions [6×10=60]

- Discuss the key differences between quantitative and qualitative research methods. How do you identify a business problem opportunity suitable for research? [5+5]
- Explain the concept of a literature review and highlight its benefits. Outline the phases involved in the literature review process to ensure a thorough understanding of the research issue. [5+5]
- Write down the meaning of measurement and scaling in research. What difference does it makes whether we measure in terms of a nominal, ordinal, interval or ratio scale? Explain giving examples. [4+6]
- Elucidate the sampling design process and distinguish between sampling and non-sampling errors in research.
- State the different sources of data. Also discuss the sources of secondary data with highlighting its limitation. [4+6]
- Write your understanding on ANOVA including the major assumptions of ANOVA.
- Can the following dataset be useful to forecast the sales of 2024? What would be the predicted sales for the year 2024?

Year	2019	2020	2021	2022	2023
Sales in Lakh Rs.	15	17	18	23	24

8. In a sample of 625 persons selected at a random from a city, 48% were males. Calculate the standard of error of sample proportion and test the hypothesis that the male and females were in equal numbers in city at 1% level of significance.

EXAMINATION PAPER

FACULTY : BUSINESS AND ACCOUNTANCY
COURSE : MASTER OF BUSINESS ADMINISTRATION (MBA)
YEAR/SEMESTER : FIRST YEAR / SEMESTER TWO
MODULE TITLE : BUSINESS RESEARCH METHODOLOGY
CODE : MGT 514
TIME ALLOWED : 3 HOURS

Instruction to candidates

- This question paper has TWO (2) Sections.
- Answer 6 questions in Section A, CAQ.
- Answer 2 questions in Section B, LAQ.
- No scripts or answer sheets are to be taken out of the Examination Hall.

Do not open this question paper until instructed

(Candidates are required to give their answers in their own words as far as practicable)

1

SECTION B

Long Answer Questions

Attempt any two (2) questions but question no. one (1) is compulsory [2×20=40]

- Study the given case carefully and answer the questions asked at the end.

Bimal Thapa Magar retired as chef from a five-star hotel in Kathmandu and returned to his hometown Butwal. However, he found it difficult to settle back into the community. He realized that he needed a vocation to keep him occupied; otherwise, he might go into depression. He was still clueless about what to do, when his friend Deepak Thapa visited him and asked him why he looked so miserable. Bimal explained his dilemma and asked his friend for advice, as Deepak understood Butwal and its residents better.

Deepak pondered over the problem, and suggested that considering Bimal's expertise in exotic cuisine, he should think about setting up a restaurant serving non-vegetarian food. The enterprise would be perfect, as Butwal hardly had any restaurant serving good non-vegetarian cuisine. Bimal liked idea very much and thought the business would be lucrative and interesting. But before putting the idea into practice, he felt that it was important to have a rough estimate of the non-vegetarian population who went out for meals in a restaurant at least once in a typical week.

Deepak recalled a hotel industry report, according to which Butwal's population comprised 70 percent non-vegetarian and 30 percent vegetarian out of total population of 500,000. Further, result of a report on hotel industry had indicated that more than 2 percent of the population of the town ate out at least once a week.

The data definitely indicated a sound and profitable business opportunity. However, Bimal felt that before setting up a restaurant serving non-vegetarian food, a quick survey should be conducted. He wanted to carry out a survey of the households to understand their preferences for various cuisines. All the households were assigned a serial number. He decided to survey 1000 households. His plan was to contact every 100th household in a particular locality and ask for their eating preferences.

Questions:

- What are the main issues of sampling? [5]
- What should be the universe and sampling frame used while selecting participants for this research project? [5]
- What types of sampling design is being used in this case? Critically examine it. [5]
- Suggest any alternative sampling design. Also indicate how the process must be carried out to execute your suggested design. [5]
